

## **790 OVERHEAD SIGN LIGHTING**

---

### **790.1 FREEWAY OVERHEAD SIGNS**

Overhead signs on freeways should not be illuminated if the sign panels have background sheeting that meets ASTM Type XI or AASHTO M268-09 Type D. Overhead guide signs having other types of background sheeting should only be illuminated if they are at or within two to three (2-3) miles in advance of and through a freeway to freeway interchange, and a minimum of least two advance guide signs for the interchange are illuminated.

### **790.2 CROSSROAD OVERHEAD SIGNS**

Overhead signs at crossroads at interchanges should not be illuminated unless there is an approved agreement with a local jurisdiction to completely finance, maintain, and operate the lighting.
